

FormatRef examples

Loading the style file `Formatted references` makes the command `formatRef` available; the `Formatted references_setup` style file sets up formatted references for equations (`eq:`), sections (`sec:`), figures (`fig:`) and tables (`tab:`).

- See section “Instructions” on the `Readme.md` file for installation instructions

$$\tan(x) = \frac{\sin(x)}{\cos(x)} \tag{1}$$

Equation (1)

1 Section

Section 1

Let us reference again Equation (1)

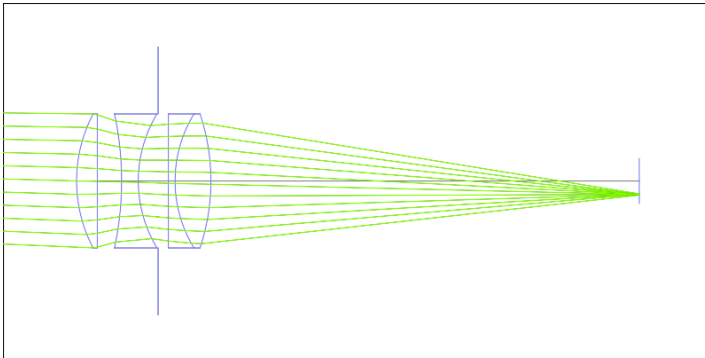

Figure 1.

Look at Figure 1: it is made with `Goptical`.
